

**MINISTRY OF HEALTH OF UKRAINE  
NATIONAL UNIVERSITY OF PHARMACY**

Educational background **Master of Pharmacy**

program subject area \_\_\_\_\_

Specialty **8.12020101 Pharmacy** Semester **6**

Educational program \_\_\_\_\_

Course unit **Pharmacognosy**

**TOPICS OF COURSE PROJECTS**

1. Black poplar: botanical description, chemical composition, uses in medicine and economics.
2. Papaya: botanical description, chemical composition, uses in medicine and economics.
3. *Canna* plants: botanical description, chemical composition, uses in medicine and economics.
4. *Hosta* plants: botanical description, chemical composition, uses in medicine and economics.
5. Green bean: botanical description, chemical composition, uses in medicine and economics.
6. Bergamot Orange: botanical description, chemical composition, uses in medicine and economics.
7. Cowberry fruits: botanical description, chemical composition, uses in medicine and economics.
8. *Phytolacca americana*: botanical description, chemical composition, uses in medicine and economics.
9. *Opophytum forsskalii*: botanical description, chemical composition, uses in medicine and economics.
10. Pomelo: botanical description, chemical composition, uses in medicine and economics.
11. Longan: botanical description, chemical composition, uses in medicine and economics.
12. Salad rocket: botanical description, chemical composition, uses in medicine and economics.
13. Chickpea: botanical description, chemical composition, uses in medicine and economics.
14. *Lens culinaris*: botanical description, chemical composition, uses in medicine and economics.
15. Sesame: botanical description, chemical composition, uses in medicine and economics.

16. Lychee: botanical description, chemical composition, uses in medicine and economics.
17. Rambutan: botanical description, chemical composition, uses in medicine and economics.
18. Dragon fruit: botanical description, chemical composition, uses in medicine and economics.
19. Soursop: botanical description, chemical composition, uses in medicine and economics.
20. Star fruit: botanical description, chemical composition, uses in medicine and economics.
21. Celery: botanical description, chemical composition, uses in medicine and economics.
22. Eggplant: botanical description, chemical composition, uses in medicine and economics.
23. Squash (*Cucurbita moschata*): botanical description, chemical composition, uses in medicine and economics.
24. Scallop (*Cucurbita pepo* var. *clypeata*): botanical description, chemical composition, uses in medicine and economics.
25. Zucchini: botanical description, chemical composition, uses in medicine and economics.
26. Cauliflower: botanical description, chemical composition, uses in medicine and economics.
27. Macadamia nut: botanical description, chemical composition, uses in medicine and economics.
28. Coconut oil: botanical description, chemical composition, uses in medicine and economics.
29. Passionfruit (*Passiflora edulis*): botanical description, chemical composition, uses in medicine and economics.
30. Guava: botanical description, chemical composition, uses in medicine and economics.
31. Kiwano: botanical description, chemical composition, uses in medicine and economics.
32. Spinach: botanical description, chemical composition, uses in medicine and economics.
33. Ackee: botanical description, chemical composition, uses in medicine and economics.
34. *Monstera deliciosa*: botanical description, chemical composition, uses in medicine and economics.
35. Fingered citron: botanical description, chemical composition, uses in medicine and economics.

36. Chayote: botanical description, chemical composition, uses in medicine and economics.
37. Salak: botanical description, chemical composition, uses in medicine and economics.
38. Cherimoya: botanical description, chemical composition, uses in medicine and economics.
39. *Nigella sativa*: botanical description, chemical composition, uses in medicine and economics.
40. *Syzygium jambos*: botanical description, chemical composition, uses in medicine and economics.
41. Black cohosh: botanical description, chemical composition, uses in medicine and economics.
42. Iceland moss: botanical description, chemical composition, uses in medicine and economics.
43. *Cinchona* plants: botanical description, chemical composition, uses in medicine and economics.
44. *Fucus vesiculosus*: botanical description, chemical composition, uses in medicine and economics.
45. European yew: botanical description, chemical composition, uses in medicine and economics.
46. *Stephania* plants: botanical description, chemical composition, uses in medicine and economics.
47. Candyleaf: botanical description, chemical composition, uses in medicine and economics.
48. *Spirulina*: botanical description, chemical composition, uses in medicine and economics.
49. *Prunus africana*: botanical description, chemical composition, uses in medicine and economics.
50. *Scopolia carniolica*: botanical description, chemical composition, uses in medicine and economics.
51. *Clitoria ternatea*, or blue tea: botanical description, chemical composition, uses in medicine and economics.
52. Saw palmetto: botanical description, chemical composition, uses in medicine and economics.
53. Sapodilla: botanical description, chemical composition, uses in medicine and economics.
54. *Fumaria officinalis*: botanical description, chemical composition, uses in medicine and economics.
55. Round-leaved sundew: botanical description, chemical composition, uses in medicine and economics.

56. Rosemary: botanical description, chemical composition, uses in medicine and economics.
57. *Chrysanthemum* plants: botanical description, chemical composition, uses in medicine and economics.
58. *Paeonia anomala*: botanical description, chemical composition, uses in medicine and economics.
59. Common cowslip: botanical description, chemical composition, uses in medicine and economics.
60. Parsnip: botanical description, chemical composition, uses in medicine and economics.
61. Kangaroo Apple: botanical description, chemical composition, uses in medicine and economics.
62. *Parmelia perlata*: botanical description, chemical composition, uses in medicine and economics.
63. *Parmelia saxatilis*: botanical description, chemical composition, uses in medicine and economics.
64. *Parmelia sulcata*: botanical description, chemical composition, uses in medicine and economics.
65. Papaya: botanical description, chemical composition, uses in medicine and economics.
66. Mistletoe: botanical description, chemical composition, uses in medicine and economics.
67. Borage: botanical description, chemical composition, uses in medicine and economics.
68. Oat: botanical description, chemical composition, uses in medicine and economics.
69. Shilajit: botanical description, chemical composition, uses in medicine and economics.
70. Mango: botanical description, chemical composition, uses in medicine and economics.
71. Peanut oil: botanical description, chemical composition, uses in medicine and economics.
72. Corn oil: botanical description, chemical composition, uses in medicine and economics.
73. Linseed oil: botanical description, chemical composition, uses in medicine and economics.
74. Palm tree oil: botanical description, chemical composition, uses in medicine and economics.
75. Coconut oil: botanical description, chemical composition, uses in medicine and economics.

76. Mangosteen: botanical description, chemical composition, uses in medicine and economics.
77. Indian tobacco: botanical description, chemical composition, uses in medicine and economics.
78. Maral root: botanical description, chemical composition, uses in medicine and economics.
79. Yellow water-lily: botanical description, chemical composition, uses in medicine and economics.
80. *Boswellia* plants: botanical description, chemical composition, uses in medicine and economics.
81. Cherry laurel: botanical description, chemical composition, uses in medicine and economics.
82. Kumquat: botanical description, chemical composition, uses in medicine and economics.
83. Kiwi: botanical description, chemical composition, uses in medicine and economics.
84. Coca: botanical description, chemical composition, uses in medicine and economics.
85. Peyote: botanical description, chemical composition, uses in medicine and economics.
86. Common mallow: botanical description, chemical composition, uses in medicine and economics.
87. Watermelon: botanical description, chemical composition, uses in medicine and economics.
88. *Carapichea ipecacuanha*: botanical description, chemical composition, uses in medicine and economics.
89. *Anabasis aphylla*: botanical description, chemical composition, uses in medicine and economics.
90. *Phlomis pungens*: botanical description, chemical composition, uses in medicine and economics.
91. Mountain knotgrass: botanical description, chemical composition, uses in medicine and economics.
92. Buckwheat: botanical description, chemical composition, uses in medicine and economics.
93. *Lithospermum officinale*: botanical description, chemical composition, uses in medicine and economics.
94. Walnut: botanical description, chemical composition, uses in medicine and economics.
95. Melon: botanical description, chemical composition, uses in medicine and economics.

96. Artichoke: botanical description, chemical composition, uses in medicine and economics.
97. *Ocimum basilicum*: botanical description, chemical composition, uses in medicine and economics.
98. Ambarella: botanical description, chemical composition, uses in medicine and economics.
99. Pineapple: botanical description, chemical composition, uses in medicine and economics.
100. *Delphinium* plants: botanical description, chemical composition, uses in medicine and economics.

Head of the Department of Chemistry of Natural Compounds,

professor

V.S. Kyslychenko
